

China-Puyang Global Youth Tobacco Survey (GYTS) FACT SHEET

The China-Puyang GYTS includes data on prevalence of cigarette and other tobacco use as well as information on five determinants of tobacco use: access/availability and price, environmental tobacco smoke exposure (ETS), cessation, media and advertising, and school curriculum. These determinants are components the China could include in a comprehensive tobacco control program.

The China-Puyang GYTS was a school-based survey of students in grades middle school 2 and 3 and high school grade 1, conducted in 2003.

A two-stage cluster sample design was used to produce representative data for the China-Puyang region. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 100%, the student response rate was 99.7%, and the overall response rate was 99.7%. A total of 1,934 students participated in the China-Puyang GYTS.

Prevalence

- 33.4% of students had ever smoked cigarettes (Boys = 56.9%, Girls = 12.5%)
- 9.7% currently use any tobacco product (Boys = 15.3%, Girls = 4.4%)
- 6.2% currently smoke cigarettes (Boys = 12.2%, Girls = 0.6%)
- 4.2% currently use other tobacco products (Boys = 4.4%, Girls = 3.8%)
- 7.9% of never smokers are likely to initiate smoking next year

Knowledge and Attitudes

- 35.3% think boys and 7.4% think girls who smoke have more friends
- 32.1% think boys and 21.4% think girls who smoke look more attractive
